REST API, Axios, PostgreSQL, TablePlus, JWT

PM&Collaboration:
Git, Jira, Scrum, Figma, Plai, Amplitude, Grafana, Docker

English:
C1 (Advanced)

Summary

I am a **Front-End Developer** with a strong foundation in **JavaScript, TypeScript, React.js and Redux(RTK).**

I have acquired valuable experience while **working on a SaaS product** designed to help users worldwide to convert their files into various formats.

Also, I am an **easy-going** person who finds common ground with different people. **I do not need micromanagement** and prefer the autonomy to work creatively and efficiently toward achieving the team's objectives. As an example, I always received only positive peer reviews and for the period of working remotely (including blackout), I managed to cover all the required technical needs by myself to keep being productive and online all the time.

Looking for someone to dive fast into a workflow, be proactive, initiative and business-oriented? Find my contacts on the left.

Projects

- **mopoBank**
  Repository | Demo (financial control app)
